

Notice

PHPStorm (IDE)

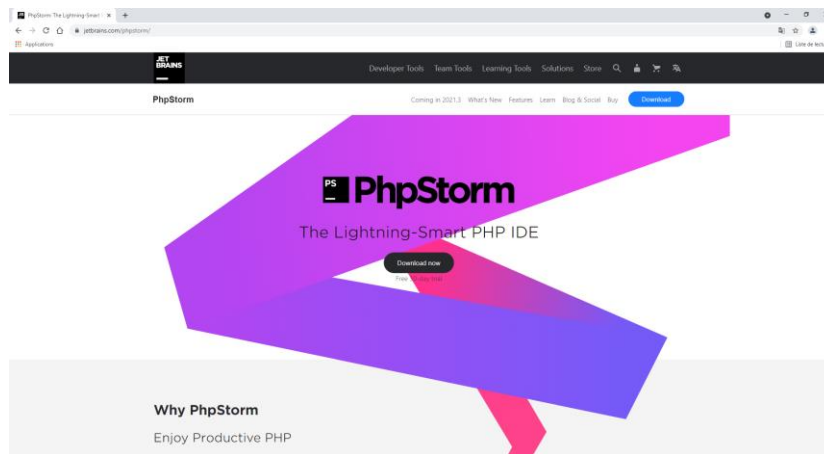

What is PHPStorm ?

PHP Storm is an editor for PHP, HTML, CSS and JavaScript.

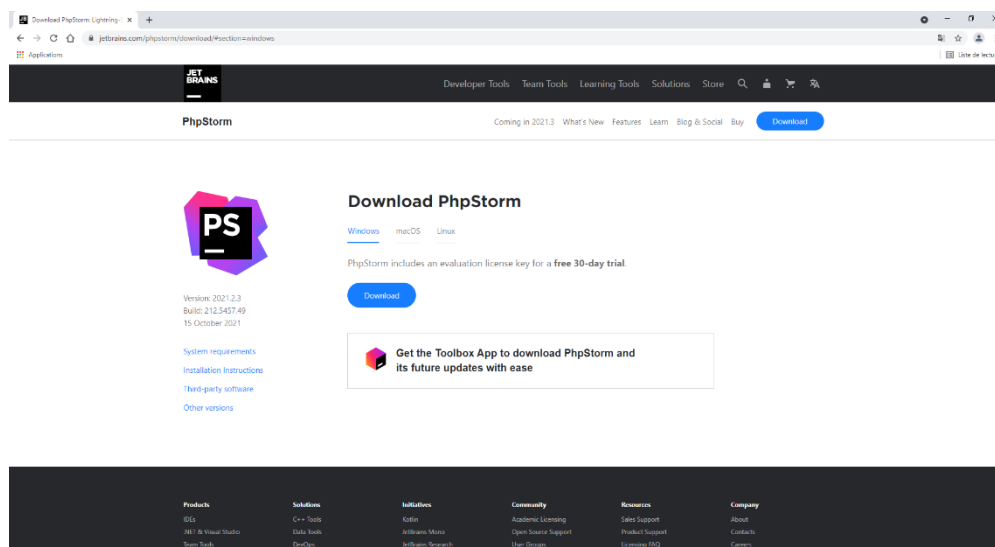

How to download it ?

First of all, you must click this link -> <https://www.jetbrains.com/fr-fr/phpstorm/>

And you should have this:

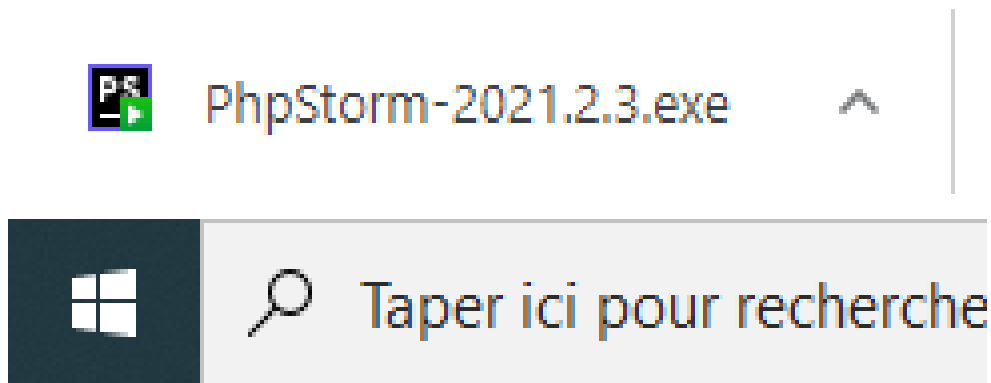

When you are here, click on **Download** and you'll end up here and you just have to hit Download again :

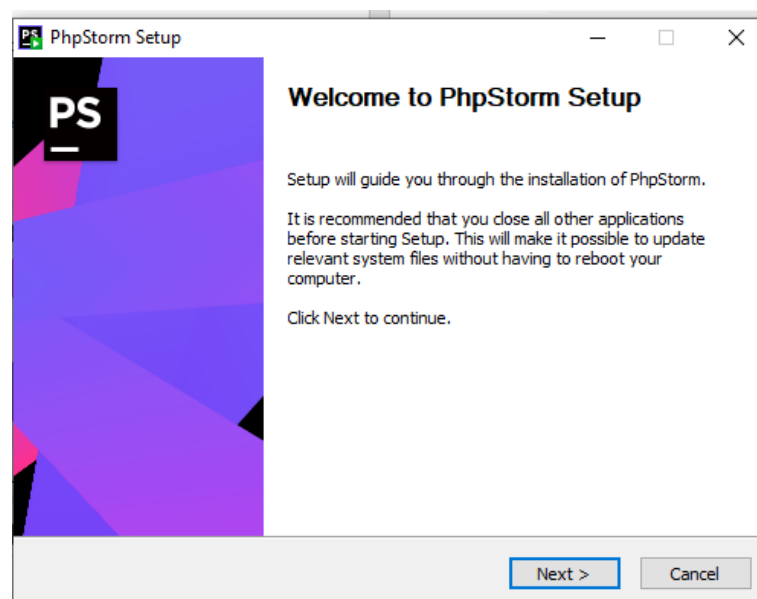

You will end up here and You click again on [Download](#). It should start downloading on your computer.

You will see the download start on the bottom left corner and when it's done just click on it to start it. It will look like this:

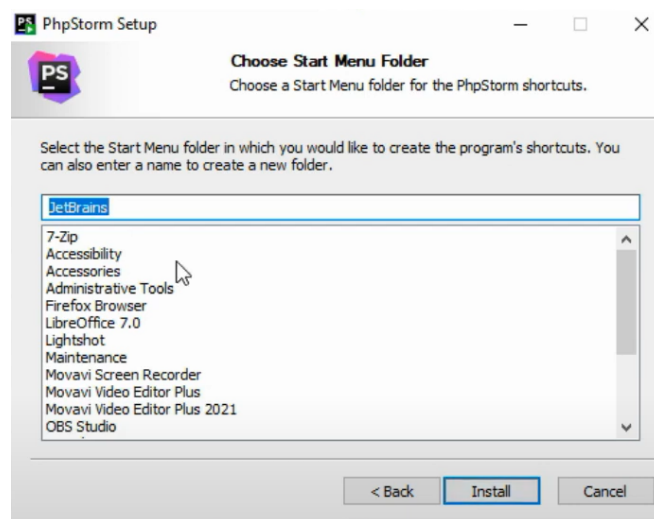

After clicking on this PHP Storm will open and you will see this:

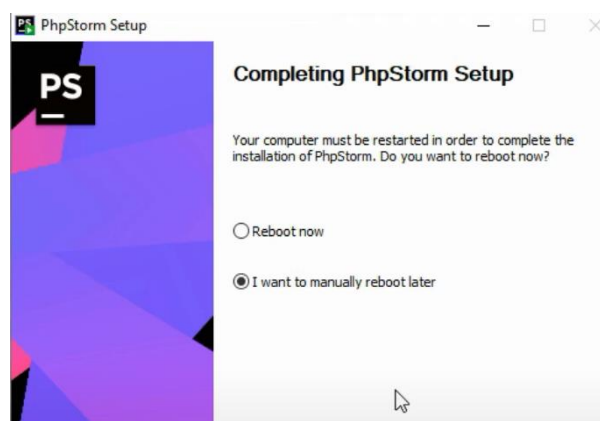

Hit **Next** until you have this and you will have to check these boxes:

After hitting **Next** you will have this look if it's on **JetBrains** and click **Install** :

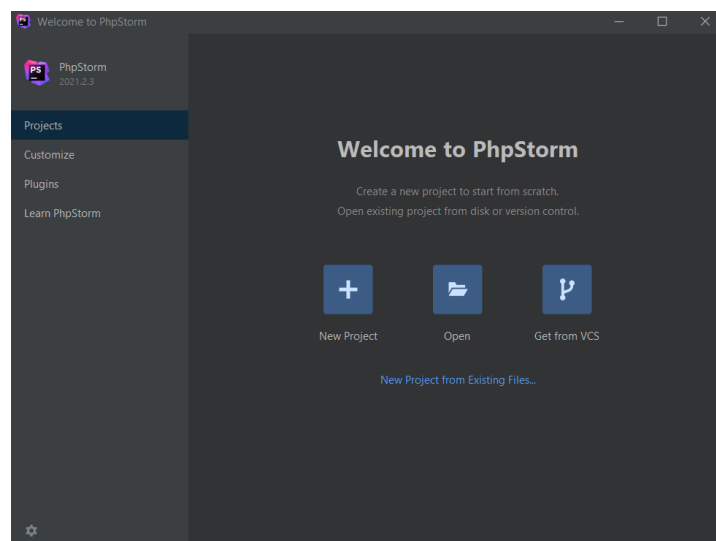

Finally you'll have this window just click on **Finish** and you are all set to use PHP Storm:

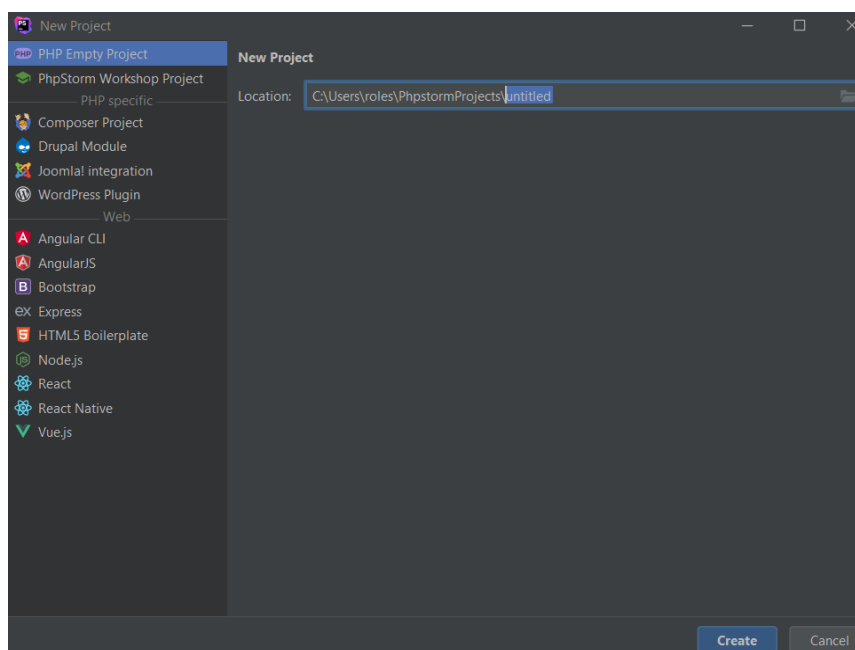

How to use PHP Storm ?

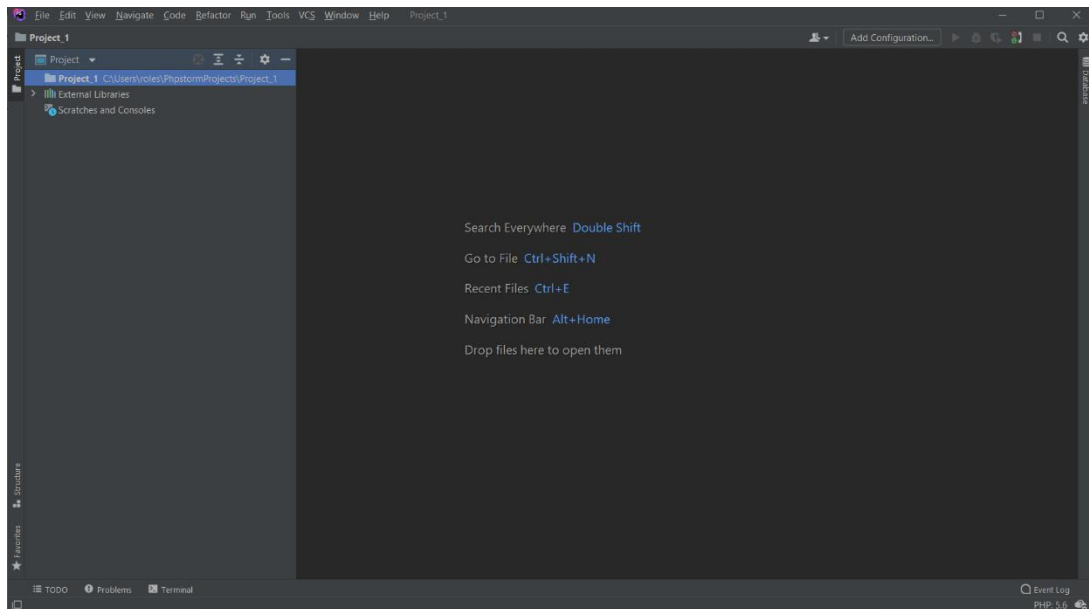

Well first open PHP Storm and this window should pop up:

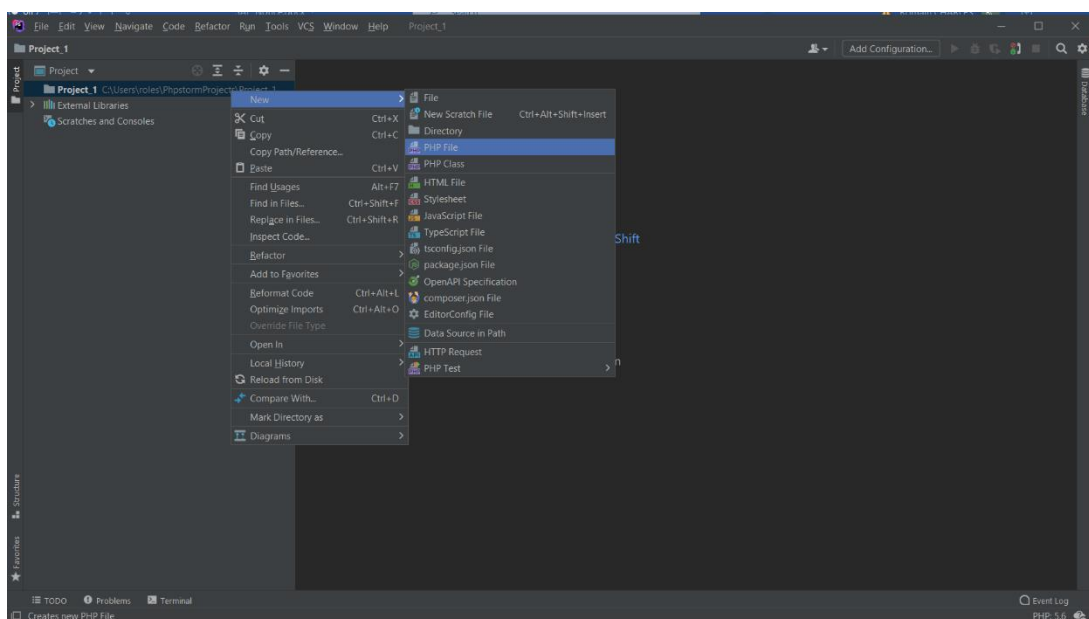

Click on **New Project** and you will have this on your screen :

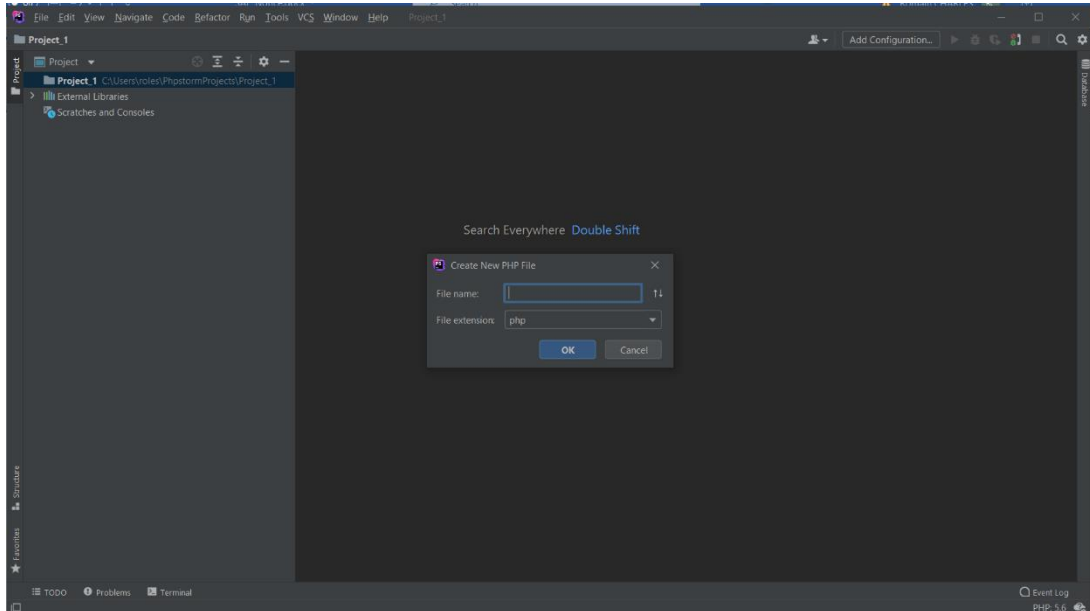

If you want to name your project just replace **Untitled** (it's highlighted in the previous picture) by the name you want after that just click on **Create** on the bottom right corner and you should have something like this :

After this you're going to Right-Click on your project then on **New** and it should look a little bit like this :

Click on **PHP File** a little window will appear where you can name your project like this :

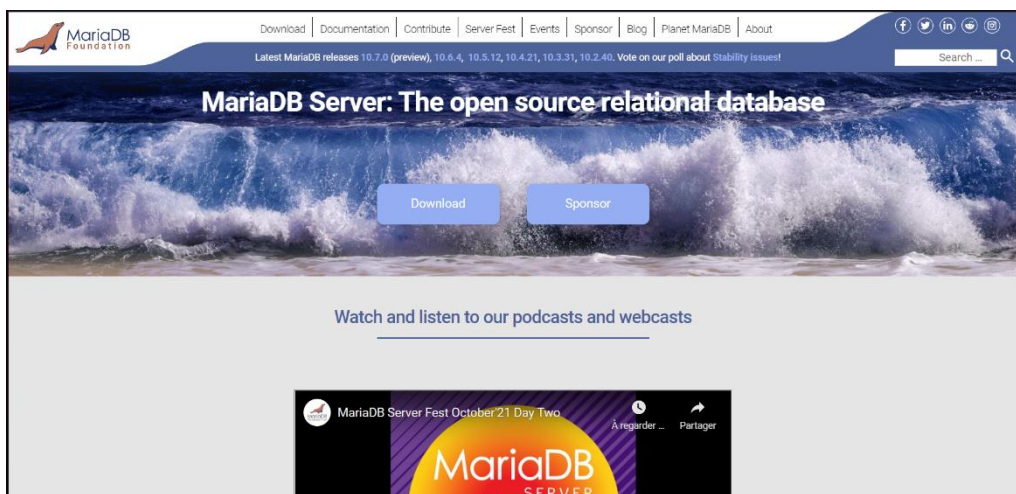

Click **OK** and you're all set, you can code with PHP Storm .

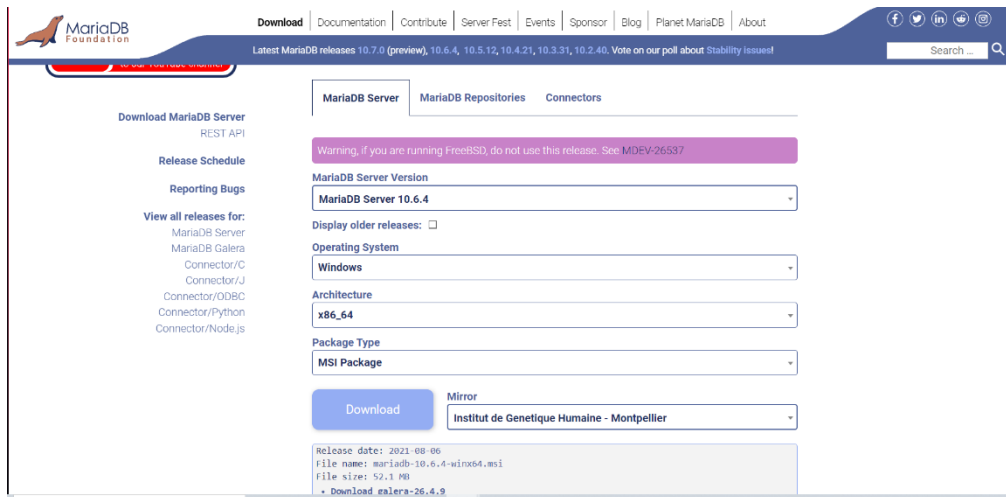

MariaDB (Data Base)

How to install it ?

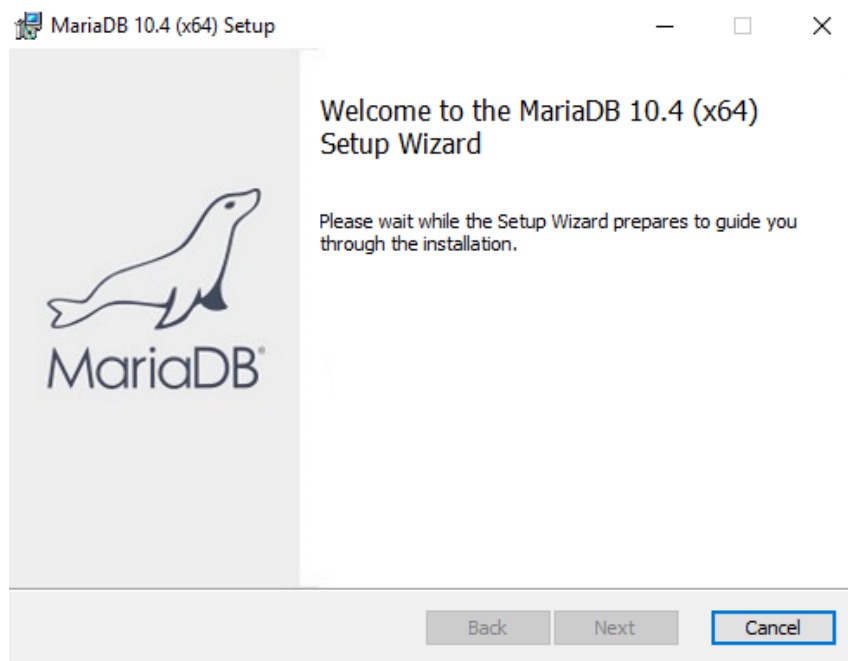

First of all click on this link <https://mariadb.org> and u should end up here:

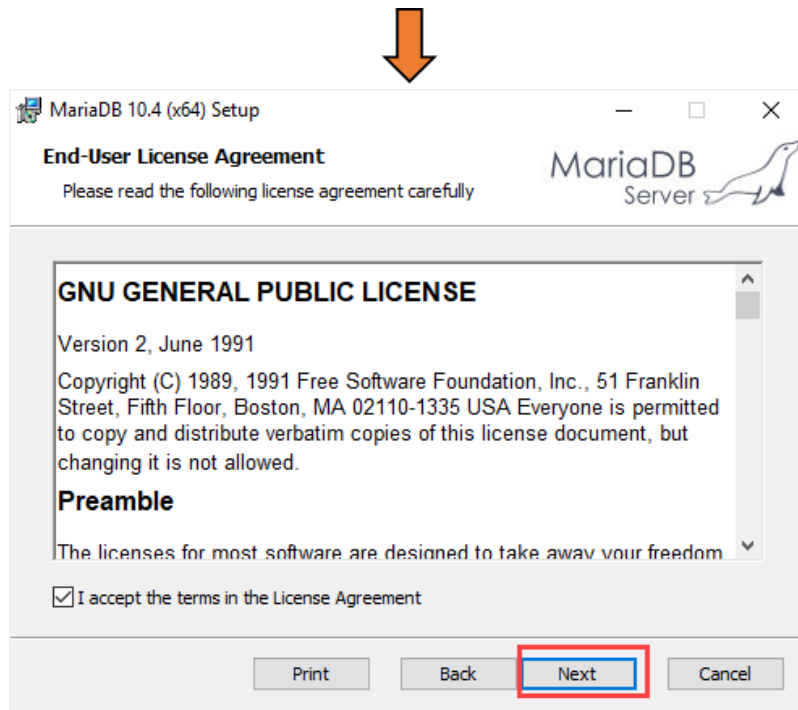

Click on [Download](#) and you'll be there :

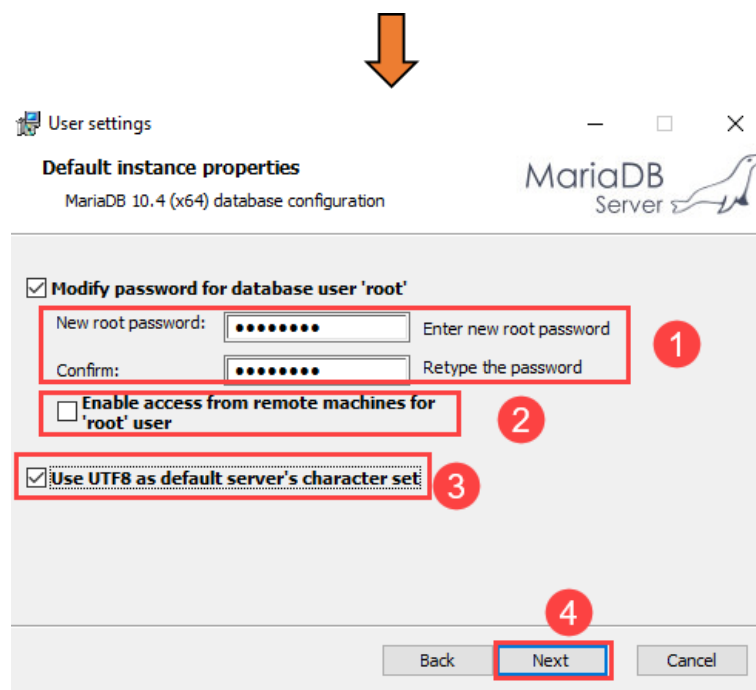

Hit again [Download](#) and you will see the programme starting to download in the bottom left corner .When it's done double click on the programme and this should pop up :

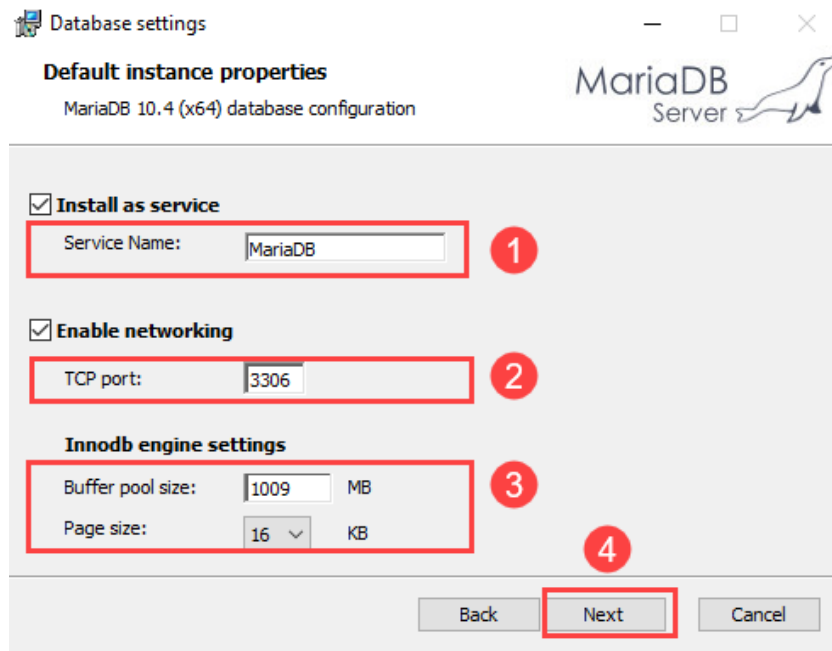

After that hit [Next](#) and then you are going to have this (unless you want to read it) just scroll down and check the box In the bottom left corner to accept it and then hit [Next](#) :

Just hit [Next](#) until you end here then enter the password that you want and then check the box in the third red box to enable UTF 8 then click [Next](#) :

You will have this window that will pop up , first you're going to check the box "Install Service " (the first one) and then write **MariaDB** for the name, then second check "Enable networking" (the second one) and use **3306** as the port (of course you can change it if you want for your own port) and last just put the same settings as show in the picture below and when you're done click **Next** :

Then click **Next** until you are here and just hit **Install** to finish it :

How to use MariaDB :

First of all you're going to write the name that you entered previously in the research bar on the bottom left corner of your Pc and enter the name that you entered previously as the Service name and something like this should appear (for me the service name is called **MySQL**) :

Click on it, after that you will have this and you just have to enter your password :

After you typed your password you will end up here and now you're all set to use MariaDB :

```
MySQL Client (MariaDB 10.2 (x64)) - "C:\Program Files\MariaDB 10.2\bin\mysql.exe" "--defaults-file=C:\Program Files\MariaDB 10.2\data\my.ini" -uroot...
Enter password: *****
Welcome to the MariaDB monitor.  Commands end with ; or \g.
Your MariaDB connection id is 8
Server version: 10.2.11-MariaDB mariadb.org binary distribution
Copyright (c) 2000, 2017, Oracle, MariaDB Corporation Ab and others.
Type 'help;' or '\h' for help. Type '\c' to clear the current input statement.
MariaDB [(none)]>
```

Nginx(Server)

How to install it ?

First off all click on this <http://nginx.org/en/download.html> and you'll end up on this :

nginx: download

How to use it ?

You can open the Manager directly from the Start menu. Here, you will be able to access the default website, which is usually located at “inetpub wwwroot.” This is also known as the web application root.

It is helpful to change the physical path of this root to a more desirable folder. I created a new “Work” folder in C:\ and changed the physical path to “C:\Work.”

After this rename your folder Nginx . Click “Conf” and select “nginx.conf.” Notepad++ can be use to edit the file , to open with Notepad++ Right-click on the file and “open with” like this :

On Notepad++ you will be able to change the root shown in the picture below :

```
*C:\Program Files\nginx-1.16.1\conf\nginx.conf - Notepad++
File Edit Search View Encoding Language Settings Tools Macro Run Plugins Window ?
change.log x nginx.conf x
25 #access_log logs/access.log main;
26
27 sendfile on;
28 #tcp_nopush on;
29
30 #keepalive_timeout 0;
31 keepalive_timeout 65;
32
33 #gzip on;
34
35 server {
36     listen 80;
37     server_name localhost;
38
39     #charset koi8-r;
40
41     #access_log logs/host.access.log main;
42
43     location / {
44         root "C:\\Work";
45         index index.html index.htm;
46     }
47
48     #error_page 404 /404.html;
```

MAMP

How to install it ?

First of all click on this link <https://www.mamp.info/en/downloads/> and then click the on for windows :

And it will start Downloading on the bottom left corner , once it's done click on it and you will have this :

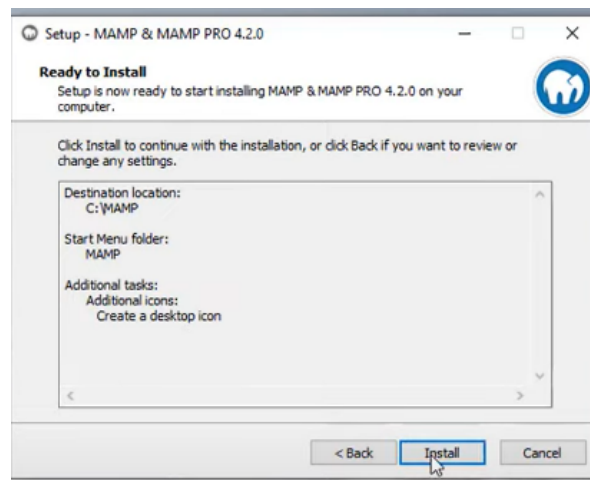

On the next one uncheck both of the boxes and click [Next](#) :

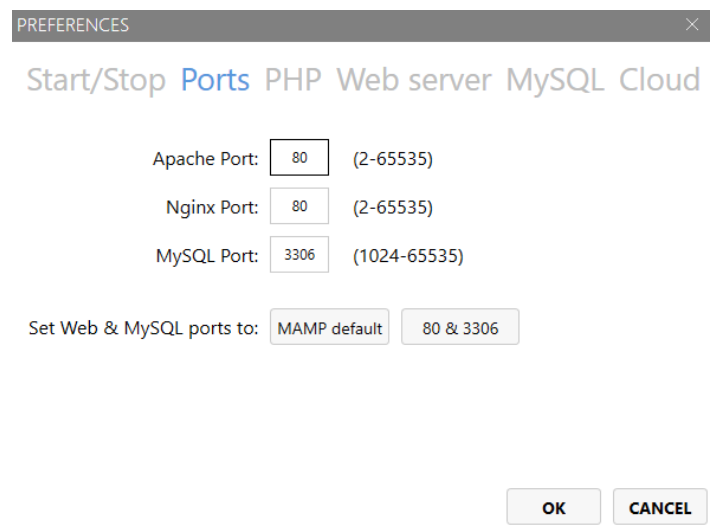

After that you will have the License Agreement , check "I accept the agreement" then [Next](#) :

Then click [Next](#) until you have this and then click [Install](#) :

To use it select the port 80:

After that put the server on Nginx et change the root for the file on Nginx :
